

PixelPals: MVP Project Overview

MVP Summary

- The PixelPals MVP demonstrates the basic working version of the website.
- All core pages are created: Home, About, Products, Product, Login, Registration, Basket, Checkout, Contact.
- Navigation works across all pages.
- Forms (login, registration, contact) successfully send POST data to the PHP backend via XAMPP.
- Backend contains placeholder PHP logic and sample product data for future development.
- UI styling, content writing, testing, and QA have been completed according to SRD roles.
- This MVP forms the foundation for the full system to be expanded in the next phase.

MVP Brief Plan

- Frontend pages created and styled.
- Backend environment set up with XAMPP.
- PHP files created for login, registration, and contact.
- Forms connected to backend routes using POST.
- Sample product data created using Russell's dataset.
- UI style guide, wireframes, and site map completed.
- Content written for all pages and ALT text added.
- Testing done by Systems Tester and QA Lead.
- Final documentation prepared and uploaded to /docs.

MVP Brief Checklist:

Maeesa: PM & Backend

- Built backend structure and PHP files
- Integrated forms with backend
- Managed GitHub, meetings, and documentation

Russell: Backend developer

- Produced product CSV
- Created data specification

Joel : Systems Testing

- Tested pages, forms, basket
- Created testing report
