Toney Shajan – 240141088

Maeesa Ali – 210091232

Dia Kaur – 230219232

Jamaal Pickford – 240365374

Joel Gyan Baffour – 240119397

Oscar Metcalf – 240395500

Russell Chamabe - 230200713

Seher Zafar – 240151995

Project Summary

PixelPals is a web-based project aimed to promote appropriate technology use among the youth. The initiative addresses concerns over physical and cognitive effects of prolonged screen time-posture, hearing, vision, and fine motor skills. Through an accessible and visually engaging website, we offer a range of ergonomically designed accessories including adaptive keyboards and mice, supportive seating, volume-sensitive headphones, and screen-time charts.

Statement of Contribution

Maeesa: Project Manager and Backend Support

Maeesa organised meetings, created a RACI chart, created the minimum viable product checklist and coordinated team meetings. She also setup the backend environment in XAMPP along with the backend folder structure and implemented all the pages necessary for the MVP (login.php, registration.php, routes.php, config.php). Frontend forms were also integrated and sample-data.php using Russells dataset. She also structured the GitHub repository and produced the Backend Architecture document, MVP summary and supported Toney with the Quality Assurance and testing preparation.

Russell : Backend Developer

Russell created the official product dataset used for the MVP. He also produced the backend data requirements and the designed products data structure. Russell also created the CSV file

and specifications used for the sample-data.php and documented backend behaviour for future implementation.

Joel: Systems Tester

Joel tested the login, registration and contact forms and checked that the navigation links, page loading and basic frontend behaviour. He also verified the basket functionality and reported any issues to developers. Joel also created the Systems Testing report with screenshots and evidence.

Seher: UI Designer

Seher developed the UI style guides (the colours, fonts, spacing and components). She also produced wireframes for all the pages and the sitemap. Seher ensured accessibility was a focus, for example making sure the contrast of colours allowed for good readability. She also helped directing the frontend developers with design.

Oscar: Frontend Developer (Main Pages)

Oscar developed the main pages of the website, such as the home, about, products and product page. He also implemented a navigation bar, structured the page layouts and improved the site visuals by implying the UI style guides.

Jamaal: Frontend Developer (Forms and Basket)

Jamaal oversaw building the login, registration, basket and checkout pages. He implemented form inputs, validation scripts and interactive elements, and developed the basket layout and behaviour.

Dia: Content and Accessibility

Dia created written content for the home, about and product pages. She also wrote the product descriptions and the ALT text for accessibility functionality. Dia also checked the readability and user friendliness of the whole site.

Toney: Quality Assurance and Submission Lead

Toney performed full site quality assurance including functionality, accessibility, performance, device support and browser support. He logged issues, verified fixed and prepared the Final Testing Report. Finally, Toney packaged the final submission, verified GitHub structure, and produced submission proof.
