

PixelPals: MVP Project Overview

MVP Summary

- The PixelPals MVP demonstrates the basic working version of the website.
- All core pages are created: Home, About, Products, Product, Login, Registration, Basket, Checkout, Contact.
- Navigation works across all pages.
- Forms (login, registration, contact) successfully send POST data to the PHP backend via XAMPP.
- Backend contains placeholder PHP logic and sample product data for future development.
- UI styling, content writing, testing, and QA have been completed according to SRD roles.
- This MVP forms the foundation for the full system to be expanded in the next phase.

MVP Plan

- Frontend pages created and styled.
- Backend environment set up with XAMPP.
- PHP files created for login, registration, and contact.
- Forms connected to backend routes using POST.
- Sample product data created using Russell's dataset.
- UI style guide, wireframes, and site map completed.
- Content written for all pages and ALT text added.
- Testing done by Systems Tester and QA Lead.
- Final documentation prepared and uploaded to /docs, then to Blackboard

MVP Checklist:

Maeesa: PM & Backend

- Set up backend folder structure
- Create backend placeholder files (config.php, login.php, registration.php, routes.php)
- Create sample-data.php using Russell's dataset
- Integrate all frontend forms with backend PHP
- Ensure XAMPP/localhost runs
- Manage GitHub repo structure
- Upload architecture diagram, RACI, minutes, MVP summary
- Coordinate frontend ↔ backend integration
- Support Joel during testing
- Support Toney for submission

Russell: Backend developer

- Create data-specification CSV
- Prepare dummy product data
- Document backend behaviour

Joel: Systems Testing

- Test login, registration, contact form backend routes
- Test navigation and basket JS
- Produce testing report

Seher: UI Design

- Create UI style guide
- Create wireframes
- Accessibility checks
- Upload sitemap + design documents

Oscar: Frontend (Main Pages)

- Build index, about, products, product pages
- Add navigation
- Apply style guide

Jamaal: Frontend (Forms & Basket)

- Build login, registration, basket, checkout pages
- Add validation + JS

Dia: Content & Accessibility

- Wrote page content, descriptions

Toney: QA & Submission

- Full QA testing and accessibility checks
- Created final testing report and submission ZIP
